COVID-19 Day 547 Press Update

September 8, 2021

DOH Acting Secretary David R. Scrase, MD, MHSA
DOH Deputy Secretary Laura C. Parajón, MD, MPH
DOH State Epidemiologist Christine Ross, MD, MPH
- 78.3% of New Mexicans (18+) and 61.5% (12-17) have received at least a first dose
- 68.4% of New Mexicans (18+) and 48.9% (12-17) are fully vaccinated
- Coming soon: We are working on dashboard updates to reflect additional doses

Source: New Mexico COVID-19 Vaccine Dashboard 09/08/21
Thank you to our mobile teams! NM National Guard and FEMA

• Over 27,000 doses given
• Improved vaccine equity
• Community organizations, churches, and difficult to reach locations
• Visit VaccineNM.org to request a COVID-19 vaccine team for your event
The deadline to sign up for August $100 vaccine incentive is this Friday!

- Any first or second shot of Pfizer or Moderna – or a first-and-only shot of J&J – during the month of August
- 3rd dose shots are not eligible
- No more than one $100 incentive per person
- $100 incentive available by email, text, or physical mail
- Email and text can only be spent online
- Physical mail can be spent anywhere, online or offline
- Register by 5 p.m. on September 10th: [https://vaccinenm.org/incentive-registration.html](https://vaccinenm.org/incentive-registration.html)
Booster doses

Purpose:
To “boost” waning immunity from vaccine

Who Qualifies?
No one yet

When Can I get the Booster?
Still waiting for final data and recommendations from FDA and CDC later this month

“But with regard to the final decision - as we've said from the very beginning, that is going to be dependent on the FDA regulatory approval.”
-- NPR interview 9/7/21
Doses Given Weekly: 12/24/2020 to Present

Total Weekly Doses

Booster shot due 6-10 months later?

Each date represents 1 week (date is end of the week)
It’s okay to get flu and COVID-19 vaccine at the same time

- Flu and the COVID-19 vaccine can be administered together **AND** in the same arm
- Childhood vaccines and the COVID-19 vaccine can be administered together
- Getting multiple vaccines together is not uncommon
Ask your provider for your next COVID-19 vaccine dose

- COVID-19 booster shots, like other vaccines, should be given in provider offices
- Ask your provider if they currently give COVID-19 vaccines, and, if not, when they will be making booster doses available
- We are working with medical and pharmacy providers to be ready
- TakeCareNM.org

Cases, hospitalizations, and deaths by vaccination status over prior 4-week period

Percent of Cases Hospitalizations and Deaths by Vaccine Status
09 August, 2021 - 06 September, 2021

- Cases:
  - Unvaccinated: 17673 (81.8%)
  - Vaccinated: 3930 (18.2%)

- Hospitalizations:
  - Unvaccinated: 906 (90.1%)
  - Vaccinated: 100 (9.9%)

- Deaths:
  - Unvaccinated: 91 (91.9%)
  - Vaccinated: 8 (8.1%)

</table>

Abbreviations: ED = emergency department; Ref = referent group.
* The hospital admission incidence rates that were used to calculate the rate ratios are 14-day average daily confirmed COVID-19 pediatric admissions per 100,000 persons aged 0–17 years. Rate in the lowest vaccination coverage quartile excludes data from Georgia because of a data quality issue.
† ED visit data are from the National Syndromic Surveillance Program (NSSP). Data are limited to ED visits with a discharge diagnosis. Data from Hawaii and Ohio are not included. Fewer than 50% of facilities in California, Iowa, Minnesota, South Dakota, and Wyoming report to NSSP. In HHS Region 7, fewer than 50% of all ED visits have a discharge diagnosis.
‡ Vaccine coverage data are for the population aged ≥12 years who completed COVID-19 vaccination series as of July 31, 2021. Idaho provides vaccine data only for vaccine recipients who are aged ≥18 years.
§ Highest vaccination states: Connecticut, Maine, Maryland, Massachusetts, New Hampshire, New Jersey, New Mexico, New York, Oregon, Rhode Island, Vermont, Virginia, and Washington (>63.45%).
** Second highest vaccination states: California, Colorado, District of Columbia, Delaware, Hawaii, Illinois, Iowa, Michigan, Minnesota, Nebraska, Pennsylvania, and Wisconsin (>56.70% and ≤63.45%).
†† Second lowest vaccination states: Alaska, Arizona, Florida, Indiana, Kansas, Kentucky, Montana, Nevada, North Carolina, Ohio, South Dakota, Texas, and Utah (>49.75% and ≤56.30%).
‡‡ Lowest vaccination states: Alabama, Arkansas, Georgia, Idaho, Louisiana, Mississippi, Missouri, North Dakota, Oklahoma, South Carolina, Tennessee, West Virginia, and Wyoming (≤49.75%).
As expected, we are now beginning to see an increase in COVID-19 deaths.
COVID-19 Treatments
There has been a significant increase in inpatient and outpatient mAb treatments, but not enough!

- Remdesivir (moderately ill, given in hospital)
- mAbs (symptoms + >64, obese, OR one risk factor, given as outpatient)

Children and adults: Get tested for COVID-19 if...

...you have COVID-19 symptoms;

...you don’t have symptoms but were in close contact to a positive case;

...you don’t have symptoms but live or work in a high-risk congregate setting; or

...you are a patient scheduled for surgery or hospital admission

Regardless of vaccination status!

Visit FindATestNM.org
Scheduling a COVID-19 test from your computer or phone is easy!

- NM COVID-19 Test Site Directory: [FindaTestNM.org](https://FindaTestNM.org)
- Surveillance testing: NMDOH suggests Vault and Curative – **Plan ahead!**
- Symptomatic or close contact testing: local hospitals, public health offices, pharmacies, doctors’ offices, and Curative test sites
  - Over-the-counter rapid tests

---

**CDC Warns of Supply Shortage for COVID-19 Rapid Tests**

There is currently a temporary shortage in point-of-care (POC) and over-the-counter (OTC) test supplies. To help preserve rapid test kits and supplies and meet the current test demand, CDC recommends the use of laboratory-based testing whenever possible.

The United States Government continues to monitor the testing supply chain and remains in contact with diagnostic test manufacturers. These companies report strong availability of laboratory instruments, laboratory test kits and other supplies, and an increasing supply of POC and OTC tests.

If laboratory directors want to request assistance to connect with a diagnostics manufacturer, they may contact AdvMedDx at staff@advameddx.org. AdvMedDx is a division of the Advanced Medical Technology Association (AdvMed) that represents more than 75 manufacturers of diagnostics tests and instruments.
eMed.com – order 6 rapid tests for $150

• Abbott's BinaxNOW COVID-19 Ag test is a rapid test for detecting active COVID-19 infections
• eMed allows you to purchase a 6 pack of tests and test at home
• Must be at least 18 years of age to order
• Test authorized for use by persons age 4+
• Test takers 14 or younger must be accompanied by an adult during specimen collection
• More information: https://www.eMed.com/
A new COVID-19 testing and screening program is ready for New Mexico schools

Made possible by ARPA funding for school testing, a new COVID-19 testing program has launched for New Mexico public school districts, public charters, nonpublic, BIE and tribal schools, including:

- Full-Service Direct Testing - Connection to a full-service screening and diagnostic testing program vendor with a variety of test options
- School Award - Direct support for the school’s existing testing and screening program
- Health Information Technology Support - Support for an electronic healthcare information database and reporting systems

Schools must apply to participate

Schools can begin applying NOW here: [NMSchoolsCovidTesting.com](NMSchoolsCovidTesting.com)
Misinformation moment: Ivermectin is NOT an approved treatment for COVID-19!

• Ivermectin is an FDA-approved prescription medication used to treat:
  • Onchocerciasis (river blindness)
  • Intestinal strongyloidiasis
  • Head lice (topical)
  • Rosacea (topical)
  • Internal and external parasitic infections in animals

• Ivermectin is NOT authorized or approved by FDA to prevent or treat any viral infection, including COVID-19
Misinformation moment: Ivermectin is NOT an approved treatment for COVID-19!

- Taking Ivermectin without medical guidance and a prescription can be dangerous, or even fatal:
  - Animal products are often highly concentrated, which can be toxic to humans
  - It can interact with other medications, such as blood-thinners
  - It can cause nausea, vomiting, diarrhea, hypotension (low blood pressure), allergic reactions (itching and hives), dizziness, or ataxia (problems with balance)
  - Overdoses can lead to seizures, comma, or death

- Call New Mexico Poison & Drug Information Center if you or someone you know has taken Ivermectin
New Mexico State Fair
September 9-19, 2021

• Proof of a completed vaccination series:
  • 2 shots of the Pfizer vaccine
  • 2 shots of the Moderna vaccine
  • 1 shot of the Johnson & Johnson vaccine

  OR

• Proof of a valid exemption, as detailed in the public health order AND a negative COVID-19 test, taken within 48 hours of your arrival to the grounds

• Children under the age of 12 are exempt
Get Vaccinated. Stay home and get tested if you have COVID-19 symptoms.

- Get tested if you think you have COVID-19 or have been exposed to someone who is positive.

- If you have a COVID-19 positive test, symptoms and risk factors, seek out monoclonal antibody treatment.

- Be especially careful indoors no matter where you live in NM.

CASE COUNTS REMAIN TOO HIGH. WE ALL STILL MUST FIGHT THE VIRUS.

- Wash hands, clean surfaces, cough into tissue/elbow.

- Everyone mask up and maintain social distancing (minimum 6’).

- Get needed preventive healthcare.

- Get vaccinated!
