**COVID-19 vaccine for kids**

(6 months and older)

**Why get the vaccine?**
The vaccine helps kids' natural immune system protect against COVID-19 so they can stay in school and do their regular activities!

**Which vaccine?**
Children ages 6 months and older get the Pfizer or Moderna vaccine.

<table>
<thead>
<tr>
<th>Pfizer</th>
<th>Moderna</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Children ages 6 months to 4 years can get 2 doses, 3 weeks apart, and a 3rd dose 8 weeks later. All 3 doses are required.</td>
<td>• Children ages 6 months to 17 years can get 2 doses, 4 weeks apart.</td>
</tr>
<tr>
<td>• Children ages 5 to 17 years can get 2 doses, 3 weeks apart, and a booster dose 5 months later.</td>
<td></td>
</tr>
</tbody>
</table>

If your child is immunocompromised, talk to a doctor about getting extra vaccine.

**What will it feel like?**
We have seen fewer side effects in young children than in older children, but some feelings might be:

- Pain on the arm
- Tired
- Headache
- Dizziness
- Chills
- Fever

Kids will feel normal after a few days!

**Is the vaccine safe?**
- Millions of children and teens have been vaccinated safely for COVID-19.
- Children will also get a lower dose of vaccine than adults.

The COVID vaccine works like other children's vaccines that have kept kids safe and healthy for generations.

To sign a child up for a vaccine, visit vaccinenm.org/kids
