

COVID-19 Vaccines

Why get the COVID-19 vaccine?

The vaccines have safely protected millions of people from getting very sick, hospitalized, or dying from COVID. The benefits you gain from the vaccine outweigh the risks of getting COVID.

COVID-19 vaccines and booster shots recommended for most people.

The Pfizer vaccine is available for both children and adults:

- Children ages 6 months to 4 years can get 2 doses, 3 weeks apart, and a 3rd dose 8 weeks later. All 3 doses are required to complete the series.
- People ages 5 years and older can get 2 doses, 3 weeks apart, and an Omicron booster 2 months later.

The Moderna vaccine is available for both children and adults:

- Children ages 6 months to 4 years can get 2 doses, 4 weeks apart.
- People ages 5 years and older can get 2 doses, 4 weeks apart, and an Omicron booster 2 months later.

The Novavax vaccine is available for both children and adults:

- People ages 12 years and older can get 2 doses, 3 weeks apart, and an Omicron booster 2 months later.

*People 18 and older who do not want an Omicron booster can get a Novavax booster 6 months after their 2nd primary dose.

The Johnson and Johnson (J&J) vaccine is available for adults:

- Adults 18 and older can get 1 dose and then an Omicron booster 2 months later.

If you are immunocompromised, you should get an extra primary dose.

A 3 dose primary series with an mRNA vaccine (Pfizer or Moderna) is recommended for immunocompromised people. People who should get an extra dose are people who:

- Have a weakened immune system
- Have cancer
- Take medications that suppress your immune system.
- Have had an organ or stem cell transplant
- Have HIV

If you think you might be in this group, please talk with a doctor or medical provider.

Who can get the Omicron booster shot?

You can get the Omicron booster if you are 5 years or older and:

- It has been 2 months or longer since you finished your primary series
- It has been 2 months or longer since your 1st or 2nd booster dose

Vaccine Schedule for Most People

People ages
6 months to
4 years with

Moderna

Pfizer

People ages
5 and older
with

Moderna

Pfizer

People ages 12 years and older with
