# COVID-19 hospitalizations by age group

Age group (years)	# Hospitalized cases (%)
<1	1 (0.10)
1-4	4 (0.38)
5-14	1 (0.1)
15-24	28 (2.7)
25-34	81 (7.8)
35-44	149 (14.3)
45-54	165 (15.9)
55-64	250 (24.1)
65-74	178 (17.1)
75-84	102 (9.8)
85+	80 (7.7)
All ages	1039

# COVID-19 age-specific hospitalization rates per 100,000 population

Source: NM Indicator-Based Information System (IBIS) was used for 2018 population estimates for each age group

# COVID-19 age-adjusted hospitalization rate by race/ethnicity per 100,000 population

Race/ethnicity	Age-adjusted rate per 100,000 population
American Indian or Alaska Native	409.6
Asian	14.3
Black or African American	27.4
Hispanic or Latino	15.6
White	10.2

Note:

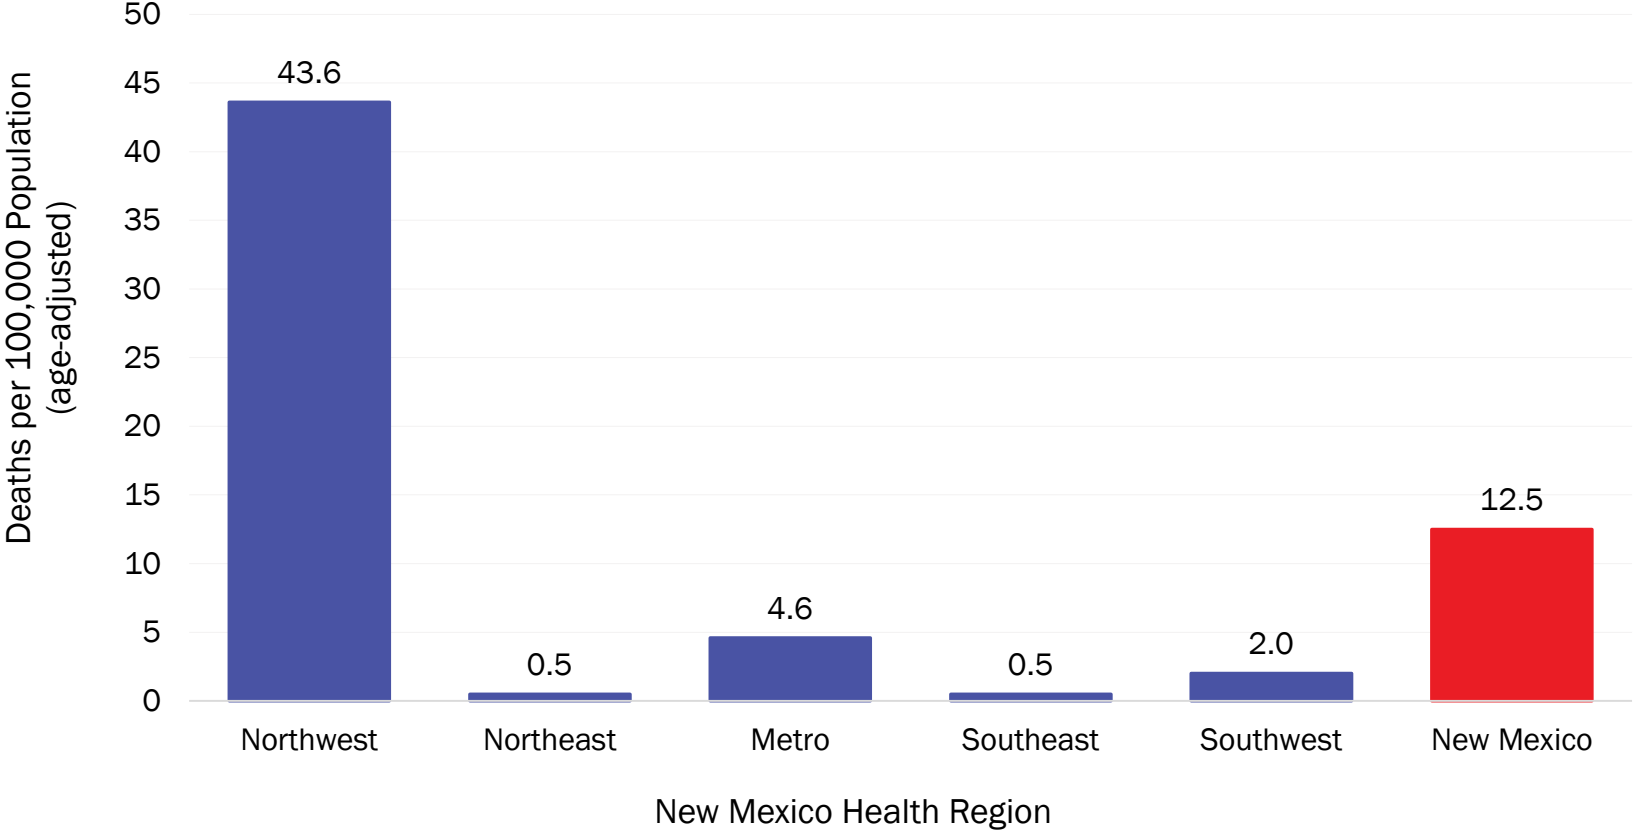

8 hospitalized cases excluded due to missing race information

1 hospitalized case was excluded because it was "Other Race" and there is no population estimate for "Other Race" in NM-IBIS

# Case fatality rate: Percentage of COVID-19 cases resulting in death by U.S. states

As of May 20, 2020

# Key points

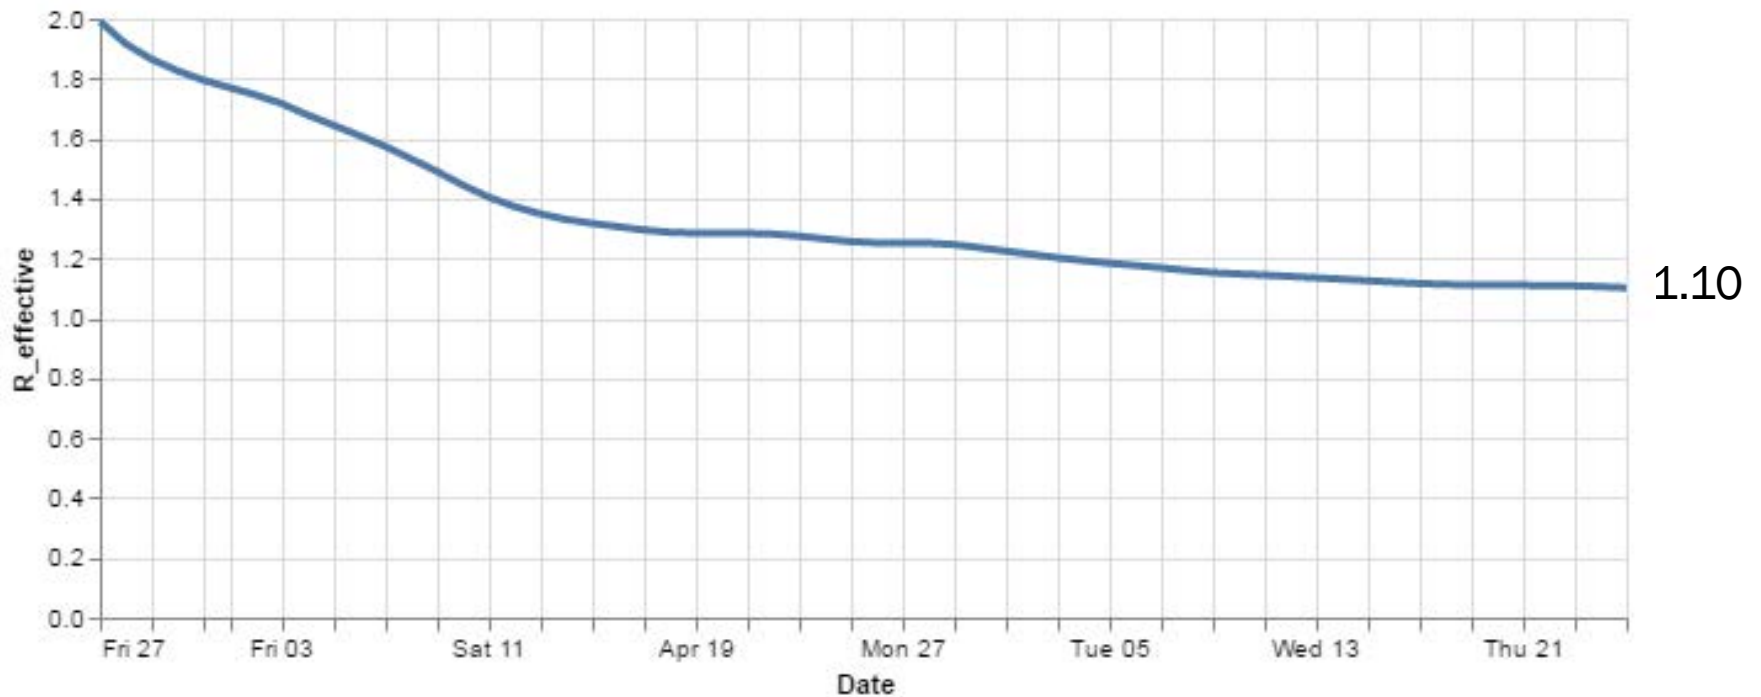

- COVID-19 prevalence continues to increase across all regions in NM
  - 22<sup>nd</sup> highest prevalence in the U.S.
  - AI/AN have highest burden of disease across all health regions except the SE where Hispanic or Latinos are most affected
  - Highest prevalence rates in Sandoval, Guadalupe, Cibola, San Juan, and McKinley counties
  - Median age of cases across all race/ethnicity groups is below 50 years old except Whites who tend to be older (median age: 60 years old)
  - Doubling times for all regions continue to increase including the SW region
- Hospitalization rates continue to increase across all regions with the highest rates in NW, Metro, and SW
  - Ventilator use remains at ~25-30% of hospitalized cases
  - Highest rates in McKinley, San Juan, Socorro, and Cibola counties (>50 cases/100,000)
  - The elderly and AI/AN groups continue to have the highest rates of hospitalizations
  - Hospitalized cases who self-identify as White tend to be older (median age: 70 years old)
- Mortality rates and case-fatality rates (CFRs) are highest in the NW region followed by Metro Region
  - 20<sup>th</sup> highest mortality rate in the U.S.
    - Highest in 85+ age group and AI/AN population
  - Age at death is higher in Whites than other race/ethnicity groups
  - NM CFR is equal to U.S. CFR after age-adjustment
    - NW and Metro regions have CFRs that are higher than the U.S. rate
    - CFRs in SE and SW have decreased since last week
    - 24<sup>th</sup> highest CFR in the U.S. (not age-adjusted)

# COVID-19 in New Mexico: modeling update

As of May 26, 2020  
Epidemiology & Response Division

The effective rate of transmission for the state has decreased slightly since last week.

R\_effective over time, state

Courtesy of Presbyterian Healthcare Services - May 26, 2020.

# The Southwest region now has the highest rate of transmission at 1.24.

## R\_effective over time, regions
